Contents

Contents	v
Preface	xvii
Acknowledgments	xvii
1.....	1
What Is Optimization?	1
1.1 Introduction	1
1.2 A Simple Product Mix Problem	1
1.2.1 Graphical Analysis.....	2
1.3 Linearity.....	5
1.4 Analysis of LP Solutions	6
1.5 Sensitivity Analysis, Reduced Costs, and Dual Prices	8
1.5.1 Reduced Costs	8
1.5.2 Dual Prices	8
1.6 Unbounded Formulations.....	9
1.7 Infeasible Formulations.....	10
1.8 Multiple Optimal Solutions and Degeneracy	11
1.8.1 The “Snake Eyes” Condition	13
1.8.2 Degeneracy and Redundant Constraints	15
1.9 Nonlinear Models and Global Optimization	16
1.10 Problems	18
2.....	21
Solving Math Programs with LINGO.....	21
2.1 Introduction	21
2.2 LINGO for Windows, Apple Mac, and Linux	21
2.2.1 LINGO Menu	23
2.2.2 Windows Menu.....	24
2.2.3 Help Menu	24
2.2.4 Summary	25
2.3 Getting Started on a Small Problem	25
2.4 Integer Programming with LINGO	26
2.4.1 Warning for Integer Programs	27
2.5 Solving an Optimization Model	27
2.6 Problems	28
3.....	31
Analyzing Solutions	31
3.1 Economic Analysis of Solution Reports	31
3.2 Economic Relationship Between Dual Prices and Reduced Costs	31
3.2.1 The Costing Out Operation: An Illustration	32
3.2.2 Dual Prices, LaGrange Multipliers, KKT Conditions, and Activity Costing.....	33
3.3 Range of Validity of Reduced Costs and Dual Prices	34

3.3.1 Predicting the Effect of Simultaneous Changes in Parameters—The 100% Rule	38
3.4 Sensitivity Analysis of the Constraint Coefficients	39
3.5 The Dual LP Problem, or the Landlord and the Renter	40
3.6 Problems	43
4.....	49
The Model Formulation Process	49
4.1 The Overall Process	49
4.2 Approaches to Model Formulation	50
4.3 The Template Approach	50
4.3.1 Product Mix Problems	50
4.3.2 Covering, Staffing, and Cutting Stock Problems	50
4.3.3 Blending Problems	50
4.3.4 Multiperiod Planning Problems	50
4.3.5 Network, Distribution, and PERT/CPM Models	51
4.3.6 Multiperiod Planning Problems with Random Elements	51
4.3.7 Financial Portfolio Models	51
4.3.8 Game Theory Models.....	52
4.4 Constructive Approach to Model Formulation.....	52
4.4.1 Example	53
4.4.2 Formulating Our Example Problem.....	53
4.5 Choosing Costs Correctly	54
4.5.1 Sunk vs. Variable Costs	54
4.5.2 Joint Products.....	56
4.5.3 Book Value vs. Market Value	57
4.6 Common Errors in Formulating Models	59
4.7 The Nonsimultaneity Error	61
4.8 Debugging a Model.....	61
4.9 Problems	63
5.....	67
The Sets View of the World	67
5.1 Introduction	67
5.1.1 Why Use Sets?.....	67
5.1.2 What Are Sets?	67
5.1.3 Types of Sets	68
5.2 The SETS Section of a Model	68
5.2.1 Defining Primitive Sets	68
5.2.2 Defining Derived Sets	69
5.2.3 Summary	70
5.3 The DATA Section	71
5.4 Set Looping Functions	73
5.4.1 @SUM Set Looping Function.....	74
5.4.2 @MIN and @MAX Set Looping Functions.....	75
5.4.3 @FOR Set Looping Function	76

5.4.4 Nested Set Looping Functions	77
5.5 Set Based Modeling Examples	77
5.5.1 Primitive Set Example	78
5.5.2 Dense Derived Set Example	81
5.5.3 Sparse Derived Set Example - Explicit List.....	83
5.5.4 A Sparse Derived Set Using a Membership Filter	88
5.5.5 Disabling Sections of Code Temporarily	92
5.6 Domain Functions for Variables.....	92
5.7 Spreadsheets and LINGO.....	93
5.8 Programming in LINGO	97
5.8.1 Building Blocks for Programming	97
5.8.2 Generating Graphs and Charts	99
5.9 Problems	102
6.....	103
Product Mix Problems.....	103
6.1 Introduction	103
6.2 Example	104
6.3 Process Selection Product Mix Problems	107
6.4 Problems	112
7.....	115
Covering, Staffing & Cutting Stock Models	115
7.1 Introduction	115
7.1.1 Staffing Problems	116
7.1.2 Example: Northeast Tollway Staffing Problems	116
7.1.3 Additional Staff Scheduling Features	118
7.2 Cutting Stock and Pattern Selection	119
7.2.1 Example: Cooldot Cutting Stock Problem	120
7.2.2 Formulation and Solution of Cooldot.....	121
7.2.3 Generalizations of the Cutting Stock Problem	125
7.2.4 Two-Dimensional Cutting Stock Problems	127
7.2.5 Paper Converting: A Rectangle Cutting Problem.....	128
7.3 Crew Scheduling Problems.....	129
7.3.1 Example: Sayre-Priors Crew Scheduling	130
7.3.2 Solving the Sayre/Priors Crew Scheduling Problem.....	132
7.3.3 Additional Practical Details.....	134
7.4 A Generic Covering/Partitioning/Packing Model	135
7.5 Problems	137
8.....	147
Networks, Distribution and PERT/CPM	147
8.1 What's Special About Network Models	147
8.1.1 Special Cases	150
8.1.2 Fitting into Network Structure: Roads with No Left Turns	150
8.2 PERT/CPM Networks and LP	151
8.3 Activity-on-Arc vs. Activity-on-Node Network Diagrams.....	156

8.4 Crashing of Project Networks	157
8.4.1 The Cost and Value of Crashing	158
8.4.2 The Cost of Crashing an Activity	158
8.4.3 The Value of Crashing a Project	158
8.4.4 Formulation of the Crashing Problem	159
8.5 Resource Constraints in Project Scheduling	162
8.6 Path Formulations	164
8.6.1 Example	165
8.7 Path Formulations of Undirected Networks	166
8.7.1 Example	167
8.8 Double Entry Bookkeeping: A Network Model of the Firm	169
8.9 Extensions of Network LP Models	170
8.9.1 Multicommodity Network Flows	171
8.9.2 Reducing the Size of Multicommodity Problems	172
8.9.3 Multicommodity Flow Example	172
8.9.4 Fleet Routing and Assignment	175
8.9.5 Fleet Assignment	178
8.9.6 Leontief Flow Models	182
8.9.7 Activity/Resource Diagrams	186
8.9.8 Spanning Trees	188
8.9.9 Steiner Trees	190
8.10 Nonlinear Networks	194
8.11 Problems	197
9	205
Multi-period Planning Problems	205
9.1 Introduction	205
9.2 A Dynamic Production Problem	207
9.2.1 Formulation	207
9.2.2 Constraints	208
9.2.3 Representing Absolute Values	210
9.3 Multi-period Financial Models	210
9.3.1 Example: Cash Flow Matching	211
9.4 Financial Planning Models with Tax Considerations	215
9.4.1 Formulation and Solution of the WSDM Problem	216
9.4.2 Interpretation of the Dual Prices	217
9.5 Present Value vs. LP Analysis	218
9.6 Accounting for Income Taxes	218
9.7 Dynamic or Multi-period Networks	222
9.8 End Effects	224
9.8.1 Perishability/Shelf Life Constraints	225
9.8.2 Startup and Shutdown Costs	225
9.9 Non-optimality of Cyclic Solutions to Cyclic Problems	226
9.10 Problems	231

10.....	235
Blending of Input Materials	235
10.1 Introduction	235
10.2 The Structure of Blending Problems	237
10.2.1 Example: The Pittsburgh Steel Company Blending Problem	238
10.2.2 Formulation and Solution of the Pittsburgh Steel Blending Problem	238
10.3 A Blending Problem within a Product Mix Problem	240
10.3.1 Formulation	241
10.3.2 Representing Two-sided Quality Constraints.....	242
10.3.3 Representing Soft Target Quality Constraints	245
10.3.4 Discrete Blending/All-or-Nothing Usage.....	246
10.3.5 Treatments vs. Ingredients in Blending Problems	247
10.4 Choice of Alternate Interpretations of Quality Requirements	248
10.5 How to Compute Blended Quality.....	250
10.5.1 Example	250
10.5.2 Generalized Mean.....	251
10.6 Interpretation of Dual Prices for Blending Constraints	253
10.7 Fractional or Hyperbolic Programming	253
10.8 Multi-Level Blending: Pooling Problems	254
10.9 Problems	260
11.....	273
Formulating and Solving Integer Programs	273
11.1 Introduction	273
11.1.1 Types of Variables.....	273
11.2 Exploiting the IP Capability: Standard Applications	274
11.2.1 Binary Representation of General Integer Variables	274
11.2.2 Minimum Batch Size Constraints	274
11.2.3 Fixed Charge Problems	275
11.2.4 The Simple Plant Location Problem.....	275
11.2.5 The Capacitated Plant Location Problem (CPL)	277
11.2.6 Modeling Alternatives with the Scenario Approach.....	279
11.2.7 Linearizing a Piecewise Linear Function, Discontinuous Case	280
11.2.8 Linearizing a Piecewise Linear Function, Continuous Case	282
11.2.9 An n Interval Piecewise Linear Function Using $\log(n)$ Binaries	284
11.2.10 Converting Multivariate Functions to Separable Functions	286
11.3 Outline of Integer Programming Methods.....	286
11.4 Computational Difficulty of Integer Programs	289
11.4.1 NP-Complete Problems	290
11.5 Problems with Naturally Integer Solutions and the Prayer Algorithm	290
11.5.1 Network LPs Revisited	291
11.5.2 Integral Leontief Constraints	291
11.5.3 Example: A One-Period MRP Problem	292
11.5.4 Transformations to Naturally Integer Formulations	294
11.6 The Assignment Problem and Related Sequencing and Routing Problems	296

11.6.1 Example: The Assignment Problem.....	296
11.6.2 The Traveling Salesperson Problem.....	298
11.6.3 Capacitated Multiple TSP/Vehicle Routing Problems	305
11.6.4 Minimum Spanning Tree	308
11.6.5 The Linear Ordering Problem.....	309
11.6.6 Quadratic Assignment Problem	312
11.7 Problems of Grouping, Matching, Covering, Partitioning, and Packing.....	315
11.7.1 Formulation as an Assignment Problem	317
11.7.2 Matching Problems, Groups of Size Two.....	317
11.7.3 Groups with More Than Two Members.....	319
11.7.4 Groups with a Variable Number of Members, Assignment Version.....	323
11.7.5 Groups with A Variable Number of Members, Packing Version	324
11.7.6 Groups with A Variable Number of Members, Cutting Stock Problem	327
11.7.7 Groups with A Variable Number of Members, Vehicle Routing	331
11.8 Linearizing Products of Variables	335
11.8.1 Example: Bundling of Products	336
11.9 Representing Logical Conditions	338
11.10 Problems	339
12.....	349
Decision making Under Uncertainty and Stochastic Programs	349
12.1 Introduction	349
12.1.1 Identifying Sources of Uncertainty	350
12.2 The Scenario Planning (SP)Approach	351
12.2.1 Formulation and Structure of an SP Problem	351
12.3 Single Stage Decisions Under Uncertainty.....	353
12.3.1 The News Vendor Problem	353
12.3.2 Multi-product Inventory with Repositioning	355
12.4 Multi-Stage Decisions Under Uncertainty	358
12.4.1 Stopping Rule and Option to Exercise Problems	359
12.4.2. An Option Exercise Stopping Problem.....	362
12.5 Expected Value of Perfect Information (EVPI)	363
12.6 Expected Value of Modeling Uncertainty.....	363
12.6.1 Certainty Equivalence	363
12.7 Risk Aversion	364
12.7.1 Downside Risk.....	365
12.7.2 Example	366
12.8 Dynamic Programming and Financial Option Models	369
12.8.1 Binomial Tree Models of Interest Rates	370
12.8.2 Binomial Tree Models of Foreign Exchange Rates.....	374
12.9 Decisions Under Uncertainty with an Infinite Number of Periods.....	376
12.9.1 Example: Cash Balance Management.....	378
12.10 Chance-Constrained Programs	381
12.11 Problems	382

13.		385
Portfolio Optimization		385
13.1 Introduction		385
13.2 The Markowitz Mean/Variance Portfolio Model		385
13.2.1 Example		386
13.3 Dualing Objectives: Efficient Frontier and Parametric Analysis.....		388
13.3.1 Portfolios with a Risk-Free Asset		389
13.3.2 The Sharpe Ratio		392
13.4 Important Variations of the Portfolio Model.....		393
13.4.1 Portfolios with Transaction Costs		394
13.4.2 Nonlinear Transaction Costs		395
13.4.3 Portfolios with Taxes		397
13.4.4 Factors Model for Simplifying the Covariance Structure		399
13.4.5 Example of the Factor Model		400
13.4.6 Scenario Model for Representing Uncertainty		402
13.4.7 Example: Scenario Model for Representing Uncertainty		402
13.5 Measures of Risk other than Variance.....		404
13.5.1 Value at Risk(VaR).....		405
13.5.2 Example of VaR		406
13.5.3 VaR Anomalies.....		408
13.5.4 Conditional Value at Risk(CVaR)		409
13.6 Scenario Model and Minimizing Downside Risk		411
13.6.1 Semi-variance and Downside Risk		412
13.6.2 Downside Risk and MAD		414
13.6.3 Power and Log Utility Functions.....		414
13.6.4 Scenarios Based Directly Upon a Covariance Matrix		415
13.7 Hedging, Matching and Program Trading		418
13.7.1 Portfolio Hedging		418
13.7.2 Portfolio Matching, Tracking, and Program Trading		418
13.8 Methods for Constructing Benchmark Portfolios		419
13.8.1 Scenario Approach to Benchmark Portfolios		422
13.8.2 Efficient Benchmark Portfolios		424
13.8.3 Efficient Formulation of Portfolio Problems		425
13.9 Cholesky Factorization for Quadratic Programs		427
13.10 Positive Definiteness Constraints		429
13.11 Problems		431
14.		433
Multiple Criteria and Goal Programming		433
14.1 Introduction		433
14.1.1 Alternate Optima and Multicriteria		434
14.2 Approaches to Multi-criteria Problems		434
14.2.1 Pareto Optimal Solutions and Multiple Criteria		434
14.2.2 Utility Function Approach		434
14.2.3 Trade-off Curves		435

14.2.4 Example: Ad Lib Marketing	435
14.2.5 Computing Trade-off Curves/Pareto Optimal Points: Pitfalls	438
14.3 Goal Programming and Soft Constraints	440
14.3.1 Example: Secondary Criterion to Choose Among Alternate Optima	440
14.3.2 Preemptive/Lexico Goal Programming	443
14.4 Minimizing the Maximum Hurt, or Unordered Lexico Minimization	446
14.4.1 Example	447
14.4.2 Finding a Unique Solution Minimizing the Maximum	447
14.5 Identifying Points on the Efficient Frontier	452
14.5.1 Efficient Points, More-is-Better Case	452
14.5.2 Efficient Points, Less-is-Better Case	454
14.5.3 Efficient Points, the Mixed Case	456
14.6 Comparing Performance with Data Envelopment Analysis	457
14.7 Problems	462
15.....	465
Economic Equilibria and Pricing	465
15.1 What is an Equilibrium?	465
15.2 A Simple Simultaneous Price/Production Decision	466
15.3 Representing Supply & Demand Curves in LPs	467
15.4 Auctions as Economic Equilibria.....	471
15.5 Multi-Product Pricing Problems	475
15.6 General Equilibrium Models of An Economy	479
15.7 Transportation Equilibria	481
15.7.1 User Equilibrium vs. Social Optimum.....	485
15.8 Equilibria in Networks as Optimization Problems	487
15.8.1 Equilibrium Network Flows	489
15.9 Problems	491
16.....	495
Game Theory and Cost Allocation.....	495
16.1 Introduction	495
16.2 Two-Person Games	495
16.2.1 The Minimax Strategy	496
16.3 Two-Person Non-Constant Sum Games	498
16.3.1 Prisoner's Dilemma	499
16.3.2 Choosing a Strategy.....	500
16.3.3 Bimatrix Games with Several Solutions	503
16.4 Nonconstant-Sum Cooperative Games with > 2 Players	505
16.4.1 Shapley Value	507
16.5 The Stable Marriage/Assignment Problem	507
16.5.1 The Stable Room-mate Matching Problem.....	511
16.6 Should We Behave Non-Optimally to Obtain Information?.....	513
16.7 Problems	514

17	517
Inventory, Production, and Supply Chain Management.....	517
17.1 Introduction	517
17.2 One Period News Vendor Problem.....	517
17.2.1 Analysis of the Decision	518
17.3 Multi-Stage News Vendor	520
17.3.1 Ordering with a Backup Option	523
17.3.2 Safety Lotsizes	525
17.3.3 Multiproduct Inventories with Substitution.....	526
17.4 Economic Order Quantity.....	530
17.5 The Q,r Model	531
17.5.1 Distribution of Lead Time Demand.....	531
17.5.2 Cost Analysis of Q,r.....	531
17.6 Base Stock Inventory Policy	536
17.6.1 Base Stock — Periodic Review.....	537
17.6.2 Policy	537
17.6.3 Analysis	537
17.6.4 Base Stock — Continuous Review	539
17.7 Multi-Echelon Base Stock, the METRIC Model	539
17.8 DC With Holdback Inventory/Capacity.....	543
17.9 Multiproduct, Constrained Dynamic Lot Size Problems	545
17.9.1 Input Data	546
17.9.2 Example	547
17.9.3 Extensions	552
17.9.10 Problems	553
18	555
Design & Implementation of Service and Queuing Systems	555
18.1 Introduction	555
18.2 Forecasting Demand for Services	555
18.3 Waiting Line or Queuing Theory	556
18.3.1 Arrival Process	557
18.3.2 Queue Discipline	558
18.3.3 Service Process	558
18.3.4 Performance Measures for Service Systems	558
18.3.5 Stationarity	559
18.3.6 A Handy Little Formula.....	559
18.3.7 Example	559
18.4 Solved Queuing Models	560
18.4.1 Number of Outbound WATS lines via Erlang Loss Model	560
18.4.2 Evaluating Service Centralization via the Erlang C Model.....	561
18.4.3 A Mixed Service/Inventory System via the M/G/ ∞ Model	563
18.4.4 Optimal Number of Repairmen via the Finite Source Model.....	563
18.4.5 Selection of a Processor Type via the M/G/1 Model.....	565

18.4.6 Multiple Server Systems with General Distribution, M/G/c & G/G/c	566
18.5 Critical Assumptions and Their Validity	568
18.6 Networks of Queues	568
18.7 Designer Queues	570
18.7.1 Example: Positive but Finite Waiting Space System	570
18.7.2 Constant Service Time. Infinite Source. No Limit on Line Length	573
18.7.3 Example Effect of Service Time Distribution	573
18.8 Problems	576
19.	579
Design & Implementation of Optimization-Based Decision Support Systems	579
19.1 General Structure of the Modeling Process	579
19.1.1 Developing the Model: Detail and Maintenance	580
19.2 Verification and Validation	580
19.2.1 Appropriate Level of Detail and Validation	580
19.2.2 When Your Model & the RW Disagree, Bet on the RW	581
19.3 Separation of Data and System Structure	582
19.3.1 System Structure	582
19.4 Marketing the Model	583
19.4.1 Reports	583
19.4.2 Report Generation in LINGO	586
19.5 Reducing Model Size	588
19.5.1 Reduction by Aggregation	589
19.5.2 Reducing the Number of Nonzeroes	592
19.5.3 Reducing the Number of Nonzeroes in Covering Problems	592
19.6 On-the-Fly Column Generation.....	594
19.6.1 Example of Column Generation Applied to a Cutting Stock Problem	595
19.6.2 Column Generation and Integer Programming	601
19.6.3 Row Generation	602
19.7 Problems	603
References	605
INDEX.....	615

Preface

This book shows how to use the power of optimization, sometimes known as mathematical programming, to solve problems of business, industry, and government. The intended audience is students of business, managers, and engineers. The major technical skill required of the reader is to be comfortable with the idea of using a symbol to represent an unknown quantity.

This book is one of the most comprehensive expositions available on how to apply optimization models to important business and industrial problems. If you do not find your favorite business application explicitly listed in the table of contents, check the very comprehensive index at the back of the book.

There are essentially three kinds of chapters in the book:

1. introduction to modeling (chapters 1, 3, 4, and 19),
2. solving models with a computer (chapters 2, 5), and
3. application specific illustration of modeling with LINGO (chapters 6-18).

Readers completely new to optimization should read at least the first five chapters. Readers familiar with optimization, but unfamiliar with LINGO, should read at least chapters 2 and 5. Readers familiar with optimization and familiar with at least the concepts of a modeling language can probably skip to chapters 6-18. One can pick and choose from these chapters on applications. There is no strong sequential ordering among chapters 6-18, other than that the easier topics are in the earlier chapters. Among these application chapters, chapters 11 (on integer programming), and 12 (on stochastic programming) are worthy of special mention. They cover two computationally intensive techniques of fairly general applicability. As computers continue to grow more powerful, integer programming and stochastic programming will become even more valuable. Chapter 19 is a concluding chapter on implementing optimization models. It requires some familiarity with the details of models, as illustrated in the preceding chapters.

There is a natural progression of skills needed as technology develops. For optimization, it has been:

- 1) Ability to solve the models: 1950's
- 2) Ability to formulate optimization models: 1970's
- 3) Ability to use turnkey or template models: 1990's onward.

This book has no material on the mathematics of solving optimization models. For users who are discovering new applications, there is a substantial amount of material on the formulation of optimization models. For the modern "two minute" manager, there is a big collection of "off-the-shelf", ready-to-apply template models throughout the book.

Users familiar with the text *Optimization Modeling with LINDO* will notice much of the material in this current book is based on material in the LINDO book. The major differences are due to the two very important capabilities of LINGO: the ability to solve nonlinear models, and the availability of the set or vector notation for compactly representing large models.

Acknowledgments

This book has benefited from comments and corrections from Egon Balas, Robert Bosch, Angel G. Coca Balta, Sergio Chayet, Bruce Colletti, Richard Darst, Daniel Davidson, Robert Dell, Hamilton Emmons, Saul Gass, Tom Knowles, Milt Guterman, Changpyo David Hong, Kipp Martin, Syam Menon, Raul Negro, David Phillips, J. Pye, Fritz Raffensperger, Rick Rosenthal, James Schmidt, Paul Schweitzer,

Rob Stubbs, David Tulett, Richard Wendell, Mark Wiley, and Gene Woolsey and his students. The outstanding software expertise and sage advice of Kevin Cunningham was crucial. Shuichi Shinmura not only translated the text into Japanese, but also in the process identified numerous opportunities for improvement in exposition. The production of this book (from editing and formatting to printing) was ably managed by Sarah Snider, Hanzade Izmit, Srinnath Tumu, Jane Rees, and Stephane Francois.
